Zero Standard **Pre-  
Launch  
Consultation  
feedback report**

- **Context**  
Feedback report

# 3

Key focus areas of the pre-launch consultation

## Executive summary

### Tested support of overall method

- High level of support for added value of NZ Standard (70%), with >50% interested in gaining SBTi validation on their net-zero targets
- Participants strongly agree on importance of mitigation hierarchy as underlying principle for NZ Standard; 60% believes that companies should go further and invest in beyond value chain mitigation

### Gathered input on materials & guidance

- ~40% feel more work needs to be done on expanding current range of methods and sector guidance
- Additional support on a variety of topics would be useful, e.g. removal accounting, scope 3 data quality and how to commit to unknowns
- Supporting materials in general rated good, room for improvement in simplification and reducing length

### Solicited open feedback from wide range of stakeholders

- Compared to the first public consultation, participants do now better understand the mitigation hierarchy underlying SBTi's method.
- Feedback was mainly focused on beyond value chain mitigation, guidance on FLAG/Scope 3, and uncertainty around claims and communications

# Respondents agree on added value of NZ Standard; but do indicate need for additional guidance and methods

The SBTi Net-Zero Standard **will really add value** to achieving global climate goals

The SBTi Net-Zero Standard is the **most comprehensive framework** for corporate climate change mitigation targets

I **understand** the Net-Zero Standard **and agree with** the overall approach

The SBTi Net-Zero Standard **demonstrates what is needed** from companies to set targets that will steer the economy to net-zero

The SBTi Net-Zero Standard will **help my company push** for the **transformational business changes** that are needed to achieve global climate goals

The SBTi Net-Zero Standard provides a **sufficient range of methods and sector-specific guidance** for a company like mine to set net-zero targets

# >50% would be interested in gaining SBTi validation of their NZ commitment, but most not before 2023

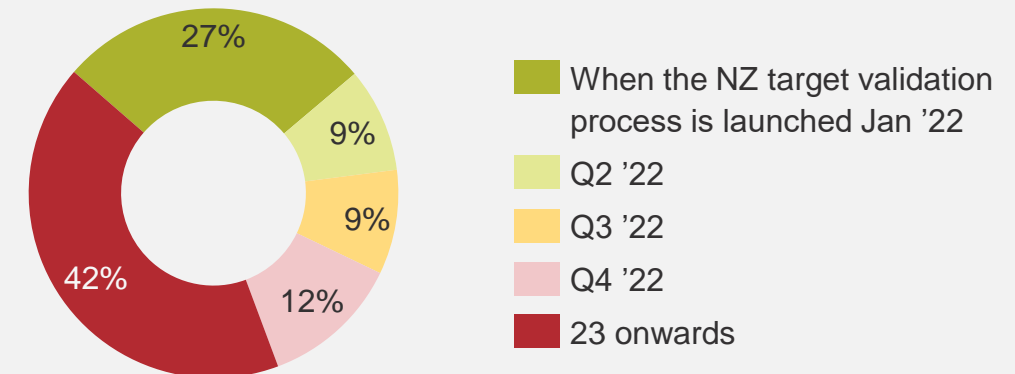

## Most companies would be interested in gaining validation

Would you be interested in gaining SBTi validation for your net-zero commitment in line with the SBTi NZ Standard?  
(N=164)

## But do not expect to go through validation within a year from now

When do you anticipate going through the net-zero target validation process with the SBTi?

## Participants strongly agree on the importance of abatement following the mitigation hierarchy...

Questions on mitigation hierarchy,  
N = 167

**Companies must follow the mitigation hierarchy** that prioritizes **abatement** of their value chain emissions **over activities to mitigate emissions** beyond their value chains

Do you feel that the **SBTi Net-Zero Standard** reflects the "mitigation hierarchy"?

Strongly disagree Disagree Neither Agree Strongly agree

Source: SBTi Net-Zero Standard Pre-Launch Consultation Survey, N=167, results retrieved 07-10-2021

## ...But do also believe beyond value chain mitigation is important

Questions on beyond value chain mitigation,  
N = 165

How important is it for companies to go beyond their science-based targets and **invest or take action to mitigate for unabated emissions** outside their value chain?

# Additional guidance and support in several areas required

In which areas do you feel companies need further guidance to **align with the Net-Zero Standard?**

Please select all that apply

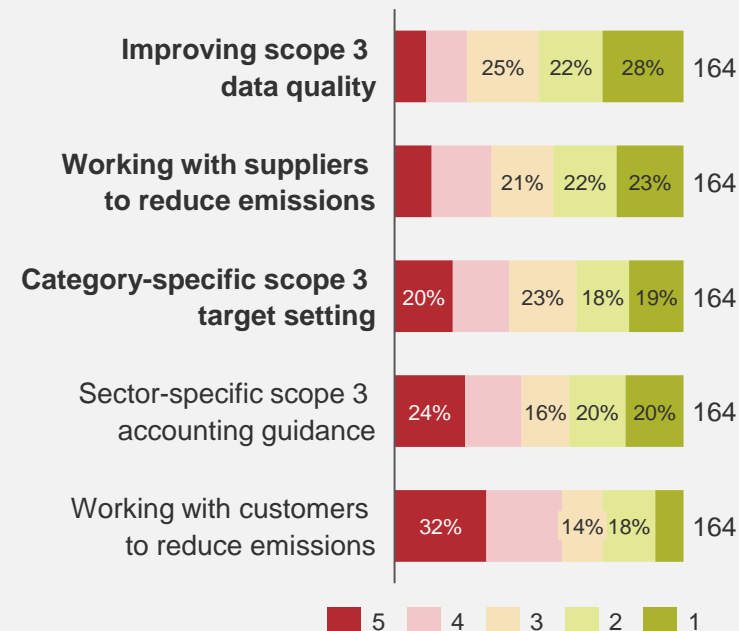

*% of respondents that picked this option*

In which areas do you feel companies need further support to **set and achieve net-zero targets, related to scope 3?**

Please rank in order of importance

*Ranking, 1 being most important*

In which areas do you feel SBTi could provide more support on **implementation and communication** of targets?

Please select all that apply

*% of respondents that picked this option*

# Participants in general rate materials as "good" or useful, but still need to be shortened and simplified

## Getting Started guide

How would you rate the following aspects?

- Suggestions**
- “ Would be useful to have an introduction before launching into the decision tree
  - “ An interactive online tool with similar content would be really helpful
  - “ Figure on page 4 is difficult to understand

## Corporate Manual

How would you rate the following aspects?

- “ Clarify information on FLAG, sector intensity pathways, base year and Box 1
- “ Include specific examples, illustrations and visual schemes
- “ Simplify language and list of contents

## Criteria

How would you rate the following aspects of the criteria (integrated in the corporate manual)?

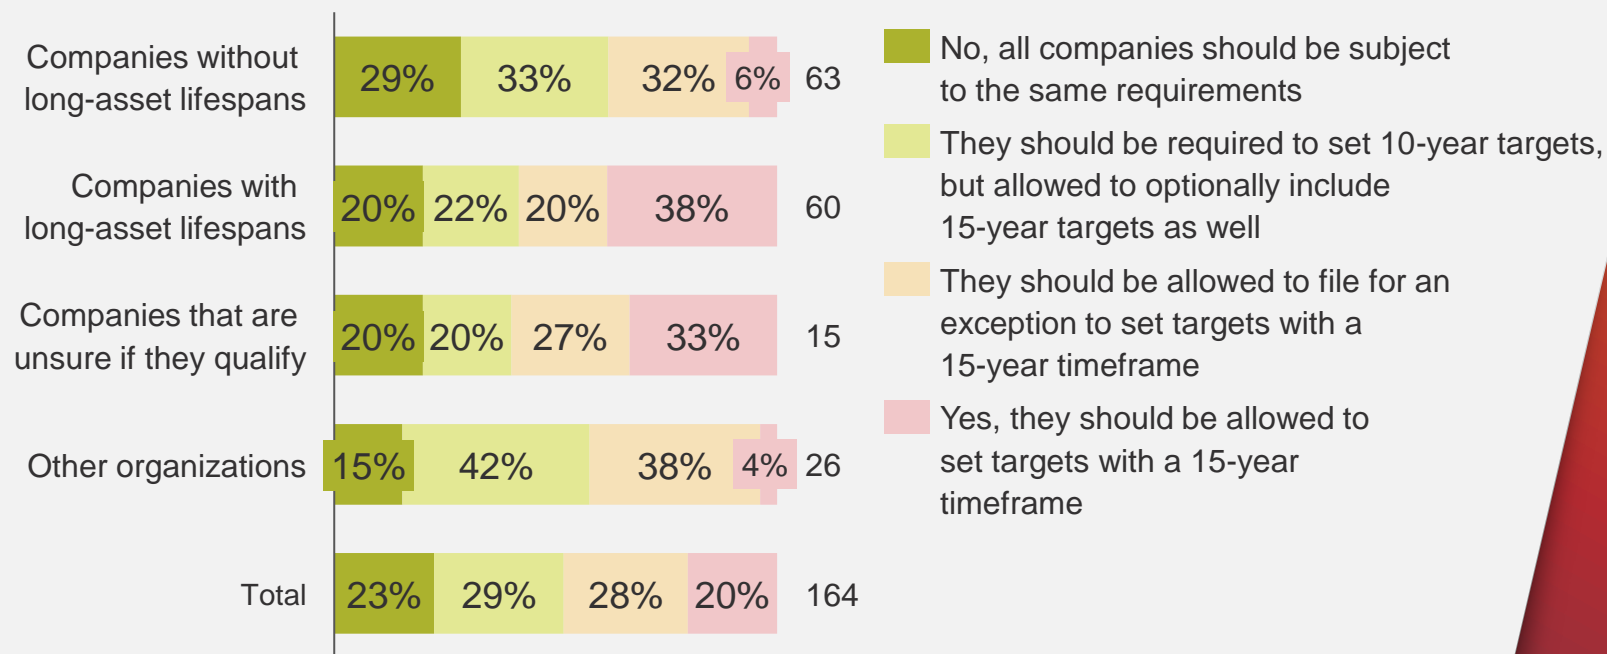

- “ Consolidate all the criteria into one master document

## Only 20% of respondents think companies in high emitting sectors should be allowed to set targets with a 15-year timeframe

Should the SBTi make an **exception** for sectors where emissions reductions over a 10-year period are limited by **long asset lifespans in eligible 1.5°C scenarios** and allow near-term SBTs with a **15-year timeframe**?<sup>1</sup>

Choosing a 10-year timeframe as default option, but creating a process for exceptional requests, might satisfy most parties

1. Self-reported if companies consider themselves to have long-asset lifespans, sectors with exception still to be defined by SBTi

**Open feedback |**  
~100 companies  
took the opportunity  
to write open  
feedback

Compared to the first public  
consultation, participants do  
now better understand the  
**mitigation hierarchy**  
underlying SBTi's method.  
Feedback was mainly  
focused on **3 key topics:**

### Beyond value chain mitigation

- “ The SBTi standard should avoid seeking perfection now to the detriment of preventing action in the near term - allow companies to have ambitious abatement targets and support investment in high quality removal solutions  
- NGO
- “ With the new Net Zero standards, we believe that SBTi has a fantastic opportunity to catalyze demand for critical component of carbon removal to solving climate change  
- Other organization
- “ What about high value nature-based removal credits that are traceable, ex-post and have a social impact in addition to carbon removal?  
- Finance

### Guidance on Scope 3 and FLAG

- “ I am still really unclear as to how our FLAG emissions and removals will be treated by SBTi  
- Land intensive
- “ Many industries have diversified S3 emissions and are merely able to conduct comprehensive measurements. 95% will turn the feasibility of committing to net-zero very low.  
- Industry company

### Claims and communications

- “ It would be great if you could outline how you will be assessing progress and publicly disclose the data you're using to assess the company performance against goals.  
- Non-profit
- “ Some companies started their decarbonization journey long before 2015 and they are being penalized by the requirement to have a baseline no earlier than 2015.  
- NGO
- “ We are concerned about the lack of a 'transient' state of net-zero emissions (i.e. achieving a balance between emissions and removals before residual emissions have been reached)  
- Professional services
- “ Is the SBTi planning on following-up on performance and put in place some form of consequences for companies not achieving reductions fast enough?  
- Fashion
