

The SBTi's Net-Zero Standard Road Test

Company road test kick-off

15th July 2021

Partner organizations

In collaboration with

Welcome to the Net-Zero company road test!

Congratulations on being selected as road tester for SBTi's Net-Zero Standard! Your input will be critical to the finalisation of the NZ standard.

THE SCIENCE BASED TARGETS INITIATIVE (SBTi)

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

Partner Organizations:

In collaboration with **WEMEAN BUSINESS**

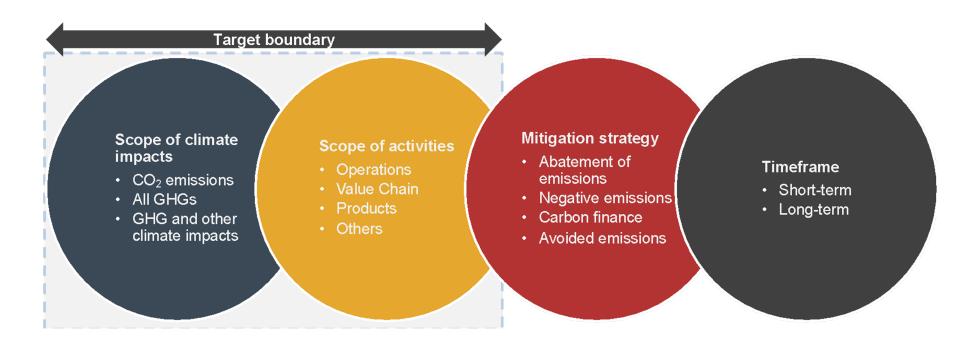

Companies are setting net-zero targets without a global standard

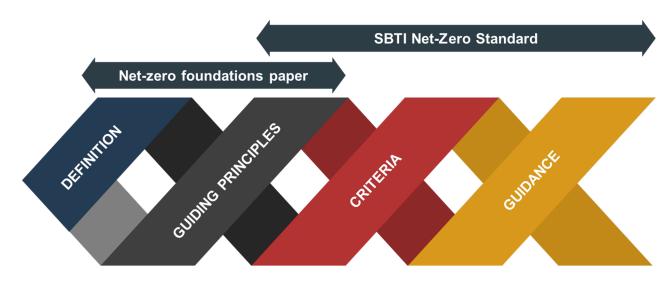

There is a high degree of heterogeneity in the current net-zero landscape. Net-zero targets differ across three important dimensions:

- 1. The sources of emissions included in the target;
- 2. The mitigation strategy pursued (including the degree of abatement achieved);
- 3. The timeframe of the target

What is the SBTi doing to address this issue? SBTi corporate net-zero standard

Definition

Net-zero definition in the corporate sector in line with guiding principles

Guiding principles

Overarching principles to inform net-zero definition and the development of net-zero guidance and criteria

Criteria

Criteria to inform the formulation and assessment of corporate net-zero targets

Net-zero guidance

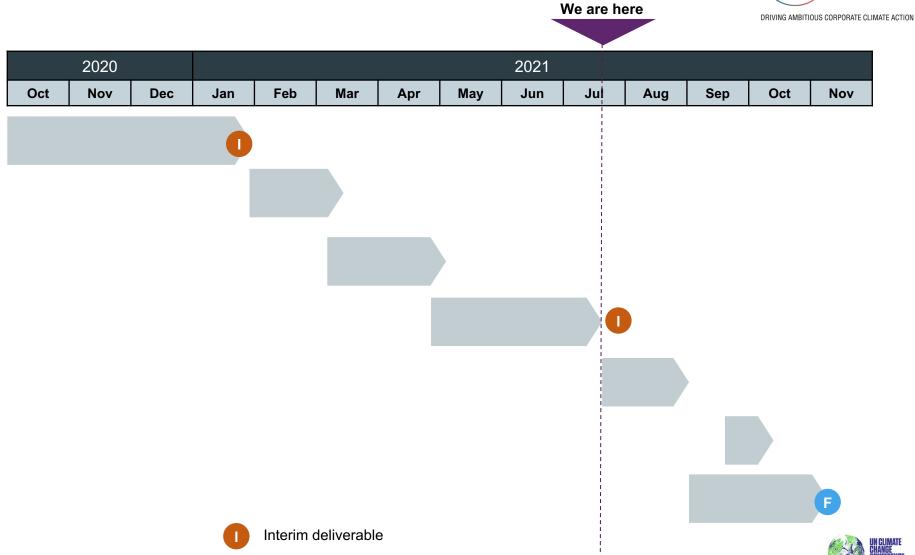

Practitioner's guidance to inform the formulation and implementation of net-zero targets in the corporate sector

- The SBTi is conducting an inclusive, stakeholder-informed process to develop a framework to enable companies to set robust and credible net-zero targets in line with a 1.5°C future.
- It includes criteria and guidance, which will enable companies to have their targets validated by the SBTi.

HOW SBTS FIT INTO A NET ZERO STRATEGY

What does net-zero mean?

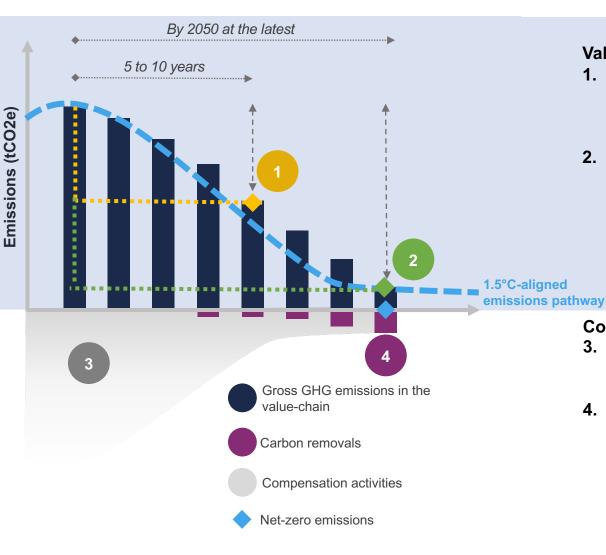

Understanding net-zero at the global level

What are the key elements that make up a company's SBTi aligned netzero commitment?

Value chain emission reductions:

- 1. Near-term science-based targets: Companies must set 5-10 year targets to reduce value chain emissions in line with limiting warming to 1.5°C.
- 2. Long-term science-based targets:
 Companies must set targets to reduce emissions to a level consistent a state of global net-zero. If target is achieved in less than 10 years, near-term SBTs (1) are not required.

Sciencebased emission reduction targets

Compensation* & neutralisation:

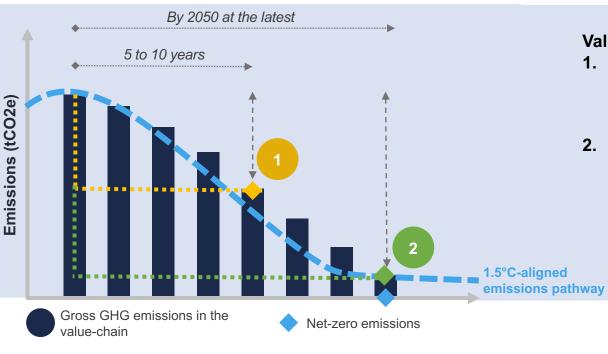

- 3. In the transition to net-zero: Companies are encouraged to compensate for remaining emissions.
- 4. At net-zero: Companies should move from compensation to removals as they get closer to net-zero to neutralise any residual emissions that cannot be eliminated. Companies cannot claim net-zero until their long-term SBT is reached and residual emissions are neutralised.

Net-zero commitment

* The term compensation is currently under review and is being used as a placeholder

This road test focusses on science-based target setting as part of a company's net-zero commitment

Value chain emission reductions:

- 1. Near-term science-based targets: Companies must set 5-10 year targets to reduce value chain emissions in line with limiting warming to 1.5°C.
- 2. Long-term science-based targets:
 Companies must set targets to reduce emissions to a level consistent a state of global net-zero. If target is achieved in less than 10 years, near-term SBTs (1) are not required.

Sciencebased emission reduction targets

SBTs help companies determine **how much** and **how fast** they need to reduce GHG emissions to reach net-zero.

Why are we focussing on emission reductions in this road test?

First things first...

Emission reductions are key to transition to global net-zero

1

- Complete emission inventory following GHG Protocol
- Set near- and long-term science-based targets to reduce value-chain emissions
- Disclose target progress annually

...while also recognizing need to go further

Compensation can accelerate the transition to global net-zero, while neutralisation is important to reach net-zero. The SBTi is conducting further research to inform its approach.

2

- In the near-term, companies are encouraged to participate in a variety of compensation actions that go further than the SBT
- In the long-term, companies will need to neutralise all residual emissions with equivalent removals

THE ROAD TESTING PROCESS

Three key objectives for the road testing process

- Gather feedback on the clarity, robustness and practicality of the target setting tool, criteria and guidance
- Identify key challenges for adoption and implementation of the standard across industries
- Build a strong network of companies on the journey to setting net-zero targets in line with climate science

Road testing deliverables

Deliver target modelling results

- Trial the target-setting tool
- Share results with SBTi

Provide detailed feedback through survey

- Review the criteria
- Answer all questions in the survey

Engage with SBTi to address issues

- Participate in workshops where possible
- Make use of office hours to discuss any questions, obstacles, or suggestions
- Participate in one-on-one discussions as needed

Recommended

participants

Become a NZ SBTi champion

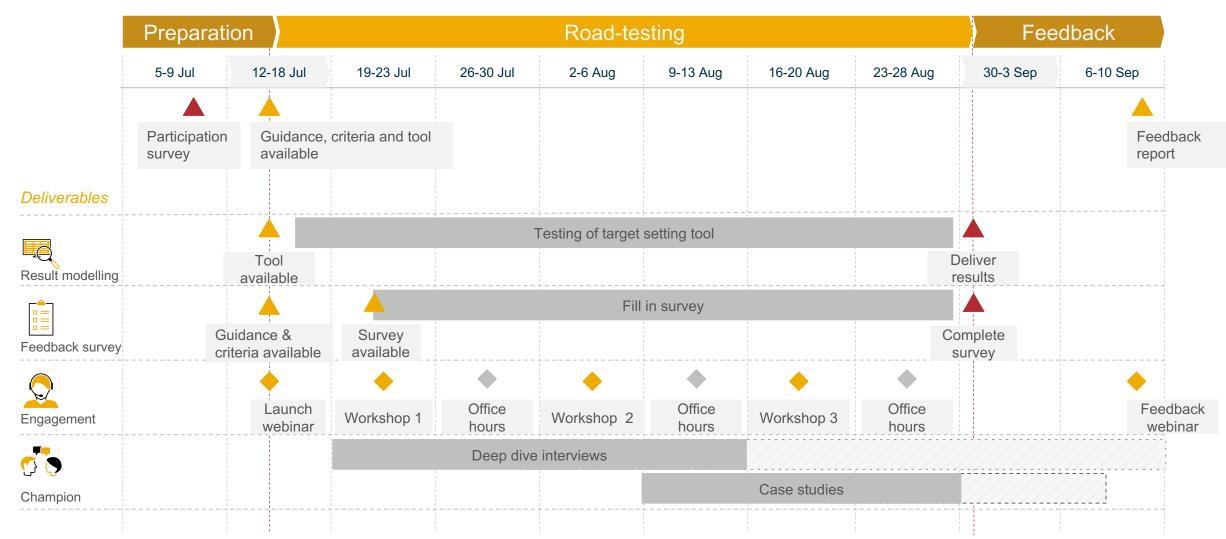

- Take part in deep dive interviews to discuss adoption barriers, expectations, gaps, etc.
- Develop case studies

Optional

What is the timeline for road testing?

Meetings to support participants and gather feedback during the process

CONFIDENTIALITY

We offer one-on-ones for participants that wish to remain confidential

ROADTESTING MATERIALS

The Net-Zero Standard Criteria

The document is laid out into three chapters and describes the requirements for companies to set science-based targets as part of a net-zero commitment.

Near-term sciencebased target criteria

Lays out requirements for nearterm science-based targets that supersede the requirements within the SBTi's science-based target criteria.

Long-term sciencebased target criteria

Addresses long-term science-based target criteria on timeframe requirements, how much value chain emissions must be reduced to reach net-zero, and how companies should define emission reduction boundaries.

- II Long-term SBT timeframe
- Long-term SBT ambition
- IV Long-term SBT boundary

Communication, Claims and Validity

The final chapter specifies official target wording that must be publicly available as well as reporting requirements.

We have developed guidance documents to assist you in the road testing process

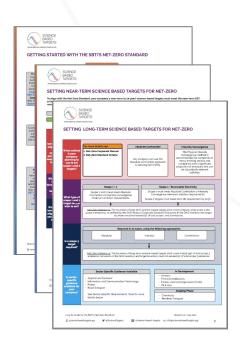

The Net-Zero How-to Guide

Step-by-step guide to setting near and long-term SBTs in alignment with the Net-Zero Standard

Includes information on:

- Planned 1.5°C pathways for near-term SBTs
- Near term SBT vs. long-term SBT requirements
- Sector-specific requirements for setting long-term science-based targets

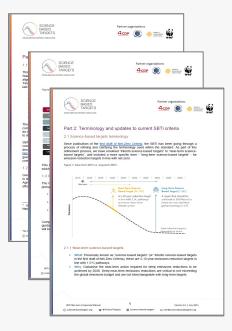

The Net-Zero Corporate Manual

Six part manual that gives detailed guidance on the Net-Zero Standard

Includes information on:

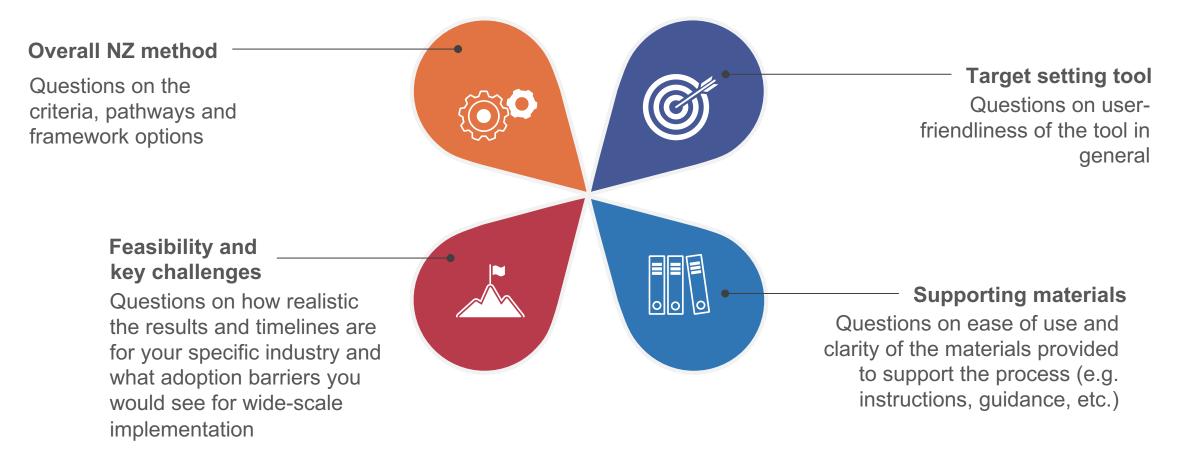

- Terminology and updates to current SBTi criteria
- Mitigation pathways in the Net-Zero Standard
- Setting near-term and longterm science-based targets
- Updating and communicating targets

Survey gathers your structured input on four key dimensions and will open next week

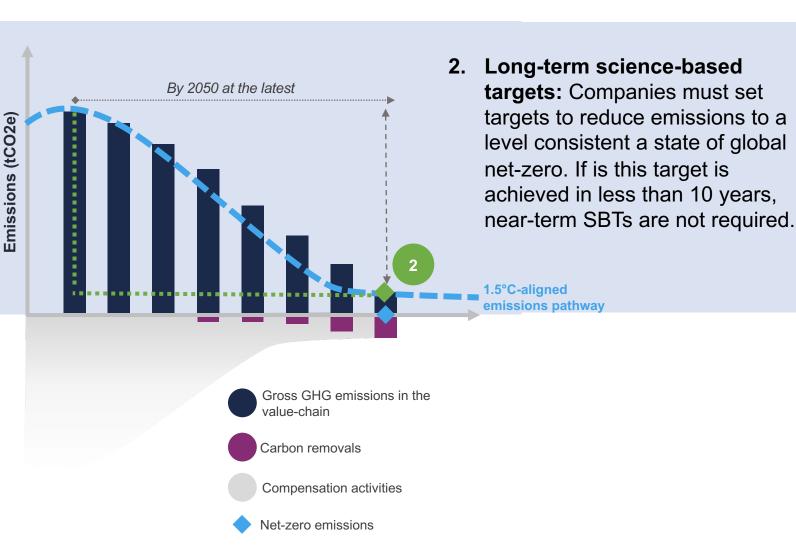

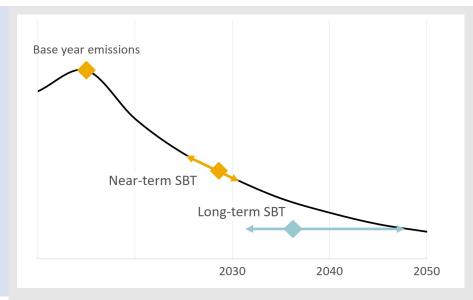

THE NET-ZERO TOOL

The SBTi has developed long-term science-based target setting methods to define what "residual emissions" are for corporates.

Near-term SBTs require a scale of emissions reduction that is company target year-dependent, while long-term science-based targets are company target year-independent.

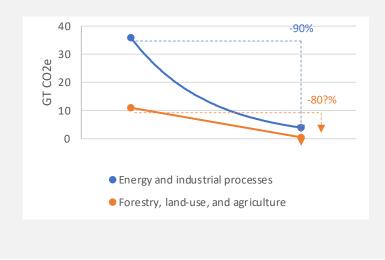

We have developed two net-zero science-based target methods

Method 1. Absolute contraction

- "One-size-fits-all" method
- Separate absolute targets required for energy & industrial processes and forestry, land-use and agriculture (FLAG)

Method 2. Sector/activity-based

- Company-specific targets reflect different levels of residual emissions per activity
- Companies in heavy-emitting sectors may use the method to calculate intensity convergence targets (like SDA)
- Demand-side companies may use the method to calculate company-specific absolute targets based on sectoral absolute contraction

You will be able to test both methods to calculate your Net Zero emission reduction target and target year in the SBTi tool

What data is required to model my targets?

Data needed to calculate your Net-Zero target with the SBTi Tool

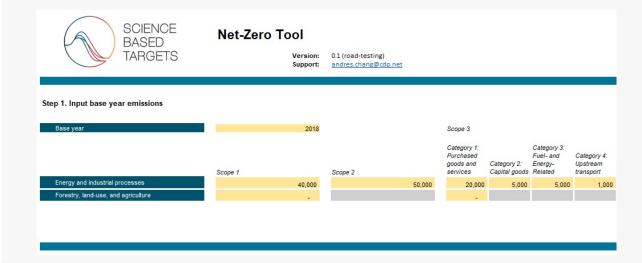

Your scope 1, 2 & 3 emission inventory

Broken down by activity/sector for pro tool

Your base year

Base year emissions data input tab

High-level overview of the basic tool

SCIENCE BASED TARGETS

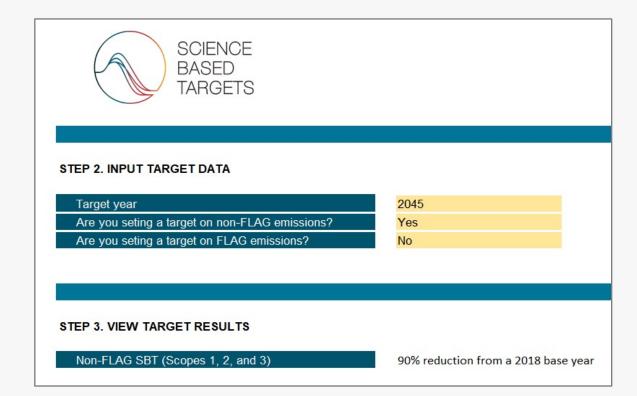

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

Allows companies to set a single combined target each for non-FLAG emissions and FLAG emissions

3 steps to calculate long-term SBTs with absolute contraction method

- Select a target year
- Select whether you are setting a target on non-FLAG and/or FLAG emissions
- 3 View target results

The tool

High-level overview of the pro tool

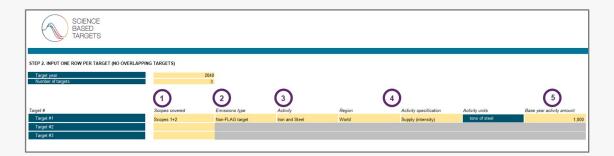

Allows companies to set multiple targets (including activityspecific targets) that cover all relevant emissions sources

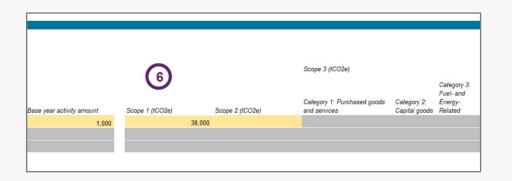

For each target

- 1 Select the scopes covered
- Select whether target covers FLAG or non-FLAG emissions
- Select pathway universal, agricultural or activity-specific
- If using an activity-specific pathway, select whether your company is demand or supply side
- If relevant, enter base year activity data
- Input emissions per scope or scope 3 category

The tool

Do you have any questions?

Thank you for listening!

For questions related to the road-testing process and the Net Zero Standard in general, please contact:

Emma Watson Senior Manager Net-Zero emma.watson@cdp.net

Paulina Tarrant Net-Zero Engagement Manager paulina.tarrant@cdp.net

The next workshop will take place next Thursday, the 22nd of July, where we will explore the NZ methods and documentation in more detail.

Thank you!
